

RITIK BANSOD

Java Backend Developer | Spring Boot · Kubernetes · Kafka · CI/CD

ritikbansod.work@gmail.com | github.com/ritikbansod | linkedin.com/in/ritik-bansod-3267011b5 | ritikbansod.github.io |
Pune, India

SUMMARY

Java Backend Developer with 3+ years at Wipro building enterprise-grade web applications and cloud-native microservices with Core Java, Spring Boot, and RESTful services. Operates containerized workloads on Kubernetes (Helm) inside Service Mesh environments, with Kafka-based event-driven integration, Jenkins CI/CD automation, and Prometheus/Grafana observability. Works AI-first with AWS Kiro and Claude agent workflows, MCP, and Spring AI.

CORE SKILLS

Languages: Core Java, Python, SQL, Shell Scripting

Backend: Spring Boot, Spring Security, Spring AOP, Hibernate/JPA, RESTful Web Services

Architecture: Microservices, Distributed Systems, Event-Driven Architecture, Service Mesh

DevOps: Docker, Kubernetes, Helm, Jenkins CI/CD, Linux/Unix, Maven, Git, Gerrit

Data & Messaging: MySQL, PostgreSQL, Apache Kafka, Strimzi, Schema Registry

Observability & Quality: Prometheus, Grafana, SonarQube, JUnit 5, Mockito

AI-Native Tooling: AWS Kiro, Claude, MCP (Model Context Protocol), Spring AI, LangChain4j

PROFESSIONAL EXPERIENCE

Software Developer | Wipro Limited, Pune, India

March 2023 to Present

- Designed and developed enterprise-grade microservices using Core Java and Spring Boot, applying OOAD, SOLID principles, and design patterns for modular, extensible components.
- Built secure, scalable RESTful APIs; resolved concurrency defects with thread-safe design, retry mechanisms, and performance profiling.
- Improved backend processing efficiency by **25%** through business workflow and data processing optimization.
- Integrated Apache Kafka with Strimzi and Schema Registry for reliable event-driven communication across distributed services.
- Containerized applications with Docker and deployed to Kubernetes via Helm charts within a Service Mesh environment.
- Increased deployment efficiency by **30%** by automating CI/CD pipelines in Jenkins.
- Implemented Prometheus and Grafana monitoring with alerting; performed root-cause analysis of production issues across distributed services.
- Strengthened code quality through SonarQube analysis, code reviews, and JUnit 5/Mockito unit and integration tests.

KEY ACHIEVEMENTS

- Cut backend processing time by **25%** by reworking business workflows and data processing paths in high-throughput services.
- Raised deployment efficiency by **30%** through fully automated Jenkins CI/CD pipelines.
- Built and published two open-source Spring Boot projects on GitHub, including an event-driven microservices platform and a Kafka REST abstraction.

PROJECTS

GRE Exam Tracker | github.com/ritikbansod/gre-exam-tracker

- Spring Boot microservices platform (Eureka discovery, API gateway) powering an online examination flow with exam authoring, candidate attempts, and server-side scoring.
- JWT authentication with role-based authorization via Spring Security; Swagger/OpenAPI docs; Hibernate/JPA tuning for concurrent candidates.

Kafka Wrapper | github.com/ritikbansod/kafka-wrapper

- REST abstraction over Apache Kafka: topic lifecycle management, message production, and runtime-registered dynamic consumers over plain HTTP.
- Removes CLI dependency for teams building on Kafka and standardizes integration interfaces for development and support workflows.

CERTIFICATIONS

AWS Certified Cloud Practitioner · Kubernetes Application Developer Training (KodeKloud) · Spring Boot Level 1 & 2 (Wipro) · Java Full Stack Development (Great Learning)

EDUCATION

Bachelor of Engineering (B.E.), Electrical Engineering

St. Vincent Pallotti College of Engineering and Technology, Nagpur | 2018 to 2022
